Education

2025 - 2029

Bachelor of Technology – Artificial Intelligence & Data Science

AD Patel Institute of Technology – Gujarat, India

Expertise

Programming & Data Analysis

- Python, SQL
- Pandas, NumPy
- Jupyter Notebook, Google Colab

Machine Learning (Basic)

- Exploratory Data Analysis (EDA)
- Classification Models (Logistic Regression, Decision Tree)
- Clustering (K-Means)

Visualization & Tools

- Matplotlib, Seaborn
- Power BI (basic)

Version Control

- Git, GitHub

CERTIFICATIONS

- **AI Training – My Job Grow (2025)**
- **AI Internship – IIT Hyderabad (2025)**
- **Introduction to Generative AI – Google Cloud (via SkillUp), 2025**

VISHVRAJSINH

SOLANKI

Artificial Intelligence & Data Science Undergraduate

B.Tech student in Artificial Intelligence & Data Science with hands on experience in data preprocessing, exploratory data analysis, and basic machine learning models. Built multiple projects using real-world datasets involving clustering and classification techniques. Currently strengthening core AI & Data Science fundamentals and seeking learning-focused internships to gain practical exposure.

PROJECTS

- **Campus Library Resource Allocation Decision Support System**
<https://github.com/vishvrajsolanki-dev/Campus-Resource-DSS>
 - Engineered a decision support system using hourly library occupancy data to recommend actionable operational decisions instead of numeric predictions.
 - Applied conservative threshold logic and time-of-day analysis to identify sustained demand while filtering short-term spikes.
 - Delivered clear outcomes: Extend operating hours / Increase seating / Monitor usage / No action required.
 - Tools: Python, Pandas, Jupyter Notebook
- **Household Electricity Consumption Pattern Mining**
<https://github.com/vishvrajsolanki-dev/electricityconsumption-pattern-mining>
 - Processed household electricity data through time-series aggregation and feature engineering to capture daily usage behavior.
 - Applied K-Means clustering to identify and interpret distinct consumption patterns.
 - Tools: Python, Pandas, NumPy, Scikit-learn, Matplotlib
- **Attendance vs Learning Quality Analysis**
<https://github.com/vishvrajsolanki-dev/attendance-learning-quality-analysis>
 - Analyzed academic attendance data to evaluate whether attendance alone reflects learning quality.
 - Designed a custom learning quality metric, conducted EDA, and applied basic classification models to support findings.
 - Tools: Python, Pandas, Scikit-learn, Matplotlib

INTERNSHIP EXPERIENCE

AI & Data Science Intern (Training-Based)

My Job Grow – Gujarat, India | Nov 2025 – Feb 2026

- Worked on guided data preprocessing, exploratory data analysis, and basic ML workflows using Python.
- Applied data cleaning, feature encoding, visualization, and introductory classification models under mentor guidance.
- Gained hands-on exposure to end-to-end data analysis and ML pipelines in a structured learning environment.
